

Anti-Piracy Shipboard Solutions!

"Fixed and Portable Searchlights for Non-Lethal Deterrence"

The NightFINDER™... World's only Searchlight and Night Vision Camera on same Pan/Tilt Aiming Platform! First spot target covertly with camera.... then since the searchlight is already aimed at the same target... flip the switch, and "instantly blind the intruder". See Exhibit A below!

Portable 350 Watt Xenon Searchlight! Mounts to pole, or vertical flat surface. External Focus Knob changes beam-size instantly with no tools. Weatherproof System can be moved around ship, and provides instant Non-lethal Force! See Exhibit B Navy Testimony below.

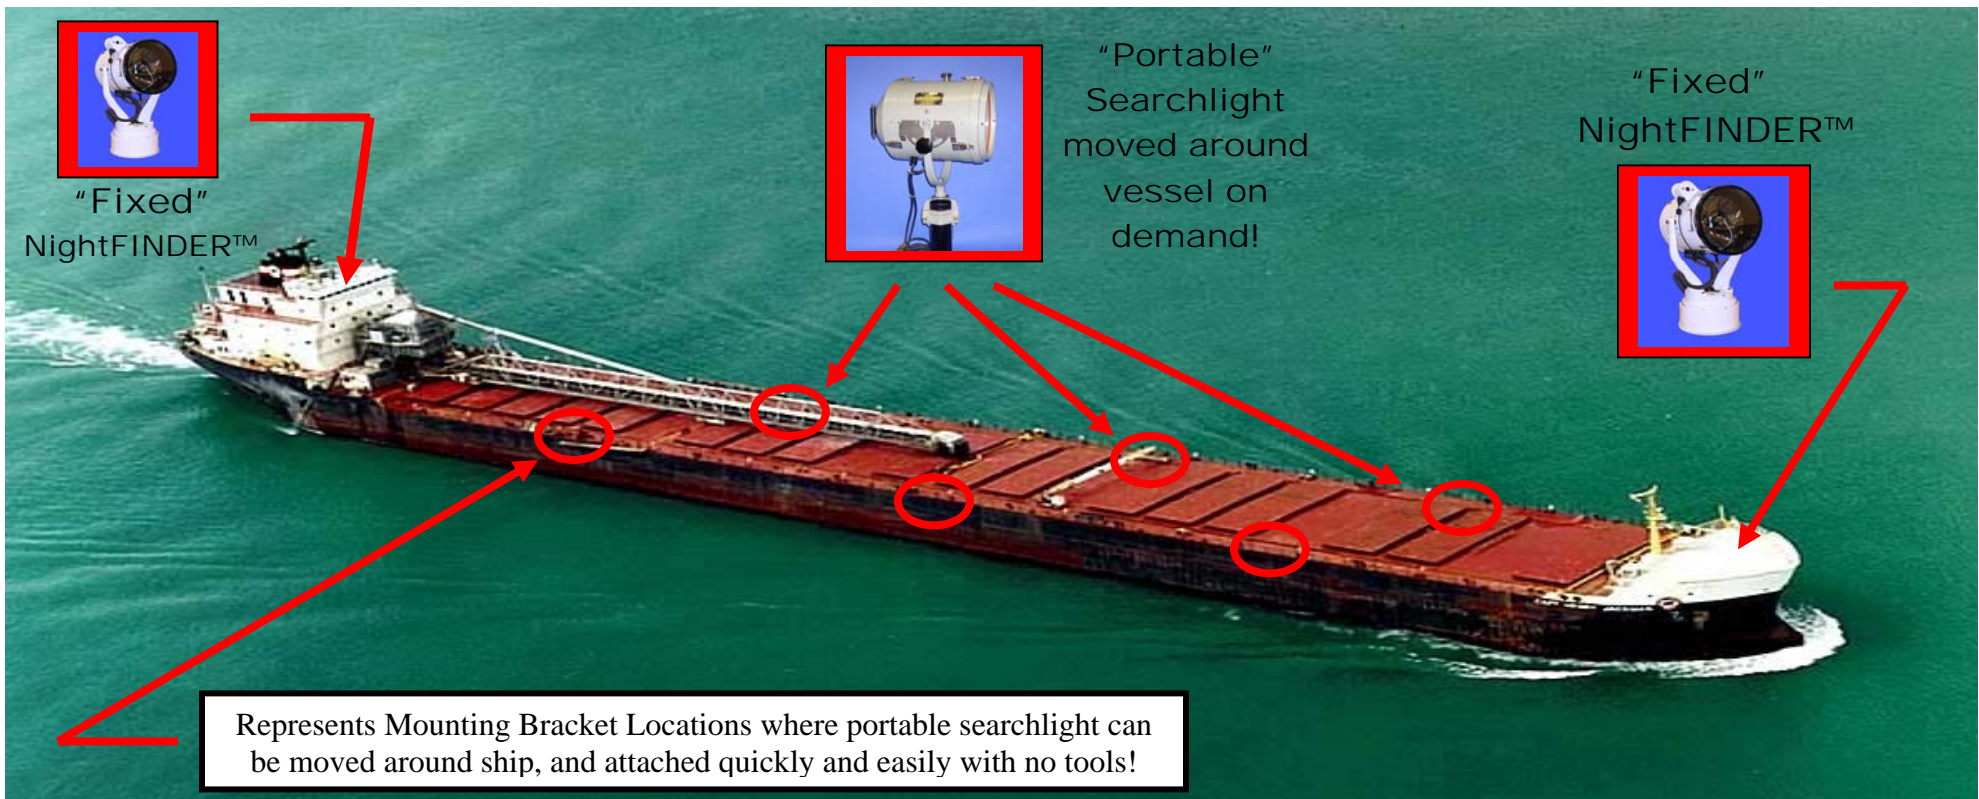

Exhibit A

Streamlined Model seen above!

Night Vision Camera detects danger covertly, and because the searchlight is aimed at the same target as camera... the operator throws the switch, and provides instant Non-lethal Deterrence!

Exhibit B

U.S. Navy "Portable Light" Perimeter Security Testimonial!

The USS John McCain "Guided Missile Destroyer"

CMR Chip Swicker of USS John McCain!

"THESE LIGHTS ARE AMAZING! In the humid air of the Arabian Gulf, the beams reach out like solid rods of white light when the top-mounted focus knob is dialed in. I am at 25 knots now, heading out to chase the Bad guys, and will be able to light'em up for real starting tomorrow night. **THANKS FOR BRINGING A GREAT PRODUCT TO OUR FLEET! "**

**CMDR Chip Swicker
USS John McCain**

“Better use of Radar, Video Cameras, thermal imaging technology, electrical fencing, running gear entanglement and high intensity directional lighting are all tools which can cut the security load on crew and make a situation safer at the same time”!

United States Coast Guard
U.S. Department of Homeland Security

The U.S. Coast Guard in May 2009 issued Directive 104-6 (Rev 2)... “Guidelines for U.S. Vessels operating in High Risk Waters”. See Exhibit C below on the next page, for excerpts on recommendations for non-lethal force!

“If that threat maneuvers toward the vessel in any menacing way, a more active response using, horns, whistles, spotlights, and flares is appropriate.”

Engineering News/July 2009*

Experts recommend
“Searchlights and Cameras” ...
we strategically combine both
on same Pan/Tilt Base!

Exhibit C

Excerpts from United States Coast Guard MARSEC May 2009 Directive 104-6 (Rev 2): "Guidelines for U.S. Vessels operating in High Risk Waters"

Prior to Entering High Risk Waters

- i. Equip vessel with non-lethal means to disrupt, disorient, and deter boarders; e.g. loud acoustic devices, **high energy light beams** or other equipment to repulse attackers is recommended.
- j. Outfit vessel with enhanced detection equipment (night vision devices, **high beam searchlights, cameras**, etc.)

During Transit of a high risk area

- e. Maintain a vigilant anti-piracy watch and ensure all shipboard anti-piracy precautions are in force. Advance warning of a possible attack will give the opportunity to sound alarms, alert other ships and the coastal authorities, **illuminate the suspect craft**, undertake evasive maneuvering, or initiate other response procedures. Augment bridge watches as necessary to perform lookout duty, including lookouts astern and other locations on the vessel to cover radar blind spots.
- q. If a vessel is at anchor or in port of a high risk area, the provisions **aft deck lighting** should be illuminated at night.

Let us specify a Security Searchlight System which suits your vessel's needs! Contact us at sales@carlislefinch.com or Tel: 513-681-6080. Web Site: www.carlislefinch.com!
